

▶ EMBOLECTOMY CATHETERS

EMBOLECTOMY CATHETER

- ▶ Short and flexible end allowing easy introduction into the artery while reducing the risks of plaque lesion
- ▶ Balloon very strong and cylinder shaped when inflated

EMBOLECTOMY CATHETERS

EMBOLECTOMY CATHETER

CHARACTERISTICS

- ▶ Latex balloon.
- ▶ The arterial embolectomy catheter is indicated for the removal of fresh, soft emboli and thrombi from vessels in the arterial system.
- ▶ The catheters are composed of a Polyamide tube with a tied latex balloon at its distal end. These catheters are easily identified by a colour code which corresponds to their size in French and are graded every 10 cm. Moreover, maximum balloon inflation capacity is printed on the proximal end of each catheter.
- ▶ The catheters should be stored in a dry, dark area away from heat.
- ▶ Sterilized by ethylene oxide.
